

SWEET ART v5.0 SOFTWARE UPDATE FOR THE CANON PRINTERS

The following instructions will allow you to update your current Sweet Art v5.0 software to be compatible with the new Canon printers. Although this update is not difficult to complete without assistance, please let us know if you would like to schedule a time for us to walk you through this process (approximately 5 min.)

- Contact Sweet Art to receive the latest Printer Update file as an email attachment.
- Save the attached “printers.cfg” file to your desktop (do not change the name or attempt to “open” the file).
- Make sure the Sweet Art Software is not running.
- Right-click on the new “printers.cfg” file on your desktop and choose “Copy” from the drop-down menu.
- Go to this location on your computer:
Computer>C: Drive>Program Files (x86)>Sweet Art>Sweet Art Decorating System
NOTE: Your computer may only have a “Program Files” folder rather than a “Program Files (x86)” folder.
- You should now see the files within the Sweet Art Decorating System folder.
- Change the name of the existing “printers.cfg” file to “OLDprinters.cfg”.
- Right-click anywhere in the Sweet Art Decorating System window and choose “Paste” from the drop-down menu.
- You should now see your new “printers.cfg” file in the Sweet Art Decorating System folder.
- Close all windows and launch the Sweet Art v5 Software.

If you have any questions please don't hesitate to email us at sales@sweetart.com.
